

September 5, 2019

Dear Murray Customer,

Siemens has made the decision to phase-out the Murray brand, which will be replaced by equivalent Siemens products. This is being done to adjust to changing markets, plan for the future, and improve supply chain stability and inventory position. The phase-out will be accomplished in three steps:

Product	Date
Murray Mini Circuit Breaker	December, 2019
Murray Electronic Breakers	
Meter Combos	
EQ Small Circuit Load Centers	
Murray Rock Solid Load Centers	Summer, 2020
Murray Sockets	Fall, 2020

Siemens and Murray Meter Combos, EQ Small Circuit Load Centers, and Breakers are typically identical in construction and only differ in labeling. Meter Sockets and Rock Solid Load Centers have Siemens units with equivalent function and size. In preparation for this multi-step phase-out, Murray Rock Solid Load Centers already include appropriate Siemens circuit breakers as listed devices on their respective wiring diagrams. In addition, Siemens has updated the UL listing of Murray Rock Solid Load Centers, Meter Combos and Small Circuit Load Centers manufactured after January of 2002 to accept Siemens breakers. Please refer to the separate substitution letter for more details.

Customers can expect the same high quality standards found in Murray to be available in the Siemens portfolio. For over 160 years, Siemens has produced industry leading electrical products that provide increased levels of safety. With its long history of engineering and innovation, Siemens has introduced advanced technologies to the residential market to maximize performance and reliability. We look forward to continued partnership with you!
